

RoMan Power Supplies / Rectifiers

Multiple Plating Tanks

RoMan Power Supplies / Rectifiers
Close-coupled to tank mounted only
1 - 5m from process

- Multiple zones providing more finite process control
- MFDC computerized controls
- Elimination of long, expensive copper bus which reduces capital investment
- Lower resistance in the secondary circuit providing higher electrical efficiency and kWh reduction
- Simplification of lock-out / tag-out procedure for a safe system
- Smaller and lighter power supplies / rectifiers which are easily installed or maintained
- Easily upgraded when additional throughput is required
