

Low Impact

Each year, RoMan Manufacturing repairs, remanufactures and recycles old transformers originally headed for the landfill.

DAS
INDUSTRIES, INC.

Through our subsidiary, DAS Industries, we reuse every part that can be salvaged, and recycle materials like copper, aluminum, and steel that typically end up in the scrap yard.

RoMan Repair Services

RoMan
Manufacturing Inc.

Reverse Engineering

With special tools, technology and extensive background, the RoMan repair team has the ability to repair any water-cooled transformer or power supply regardless of brand, make or model.

By "Reverse Engineering" the transformer during disassembly, we salvage any parts that can be reused, and recycle the rest. In many cases, we can improve upon the original design.

The result being a like-new product, with substantial time and cost savings.

This environmental friendly initiative we call "GreenRgy" is corporate commitment to reusing, recycling, remanufacturing and rebuilding in a effort to minimize our environmental impact.
